

CodySoft® March 7th 2024 release notes

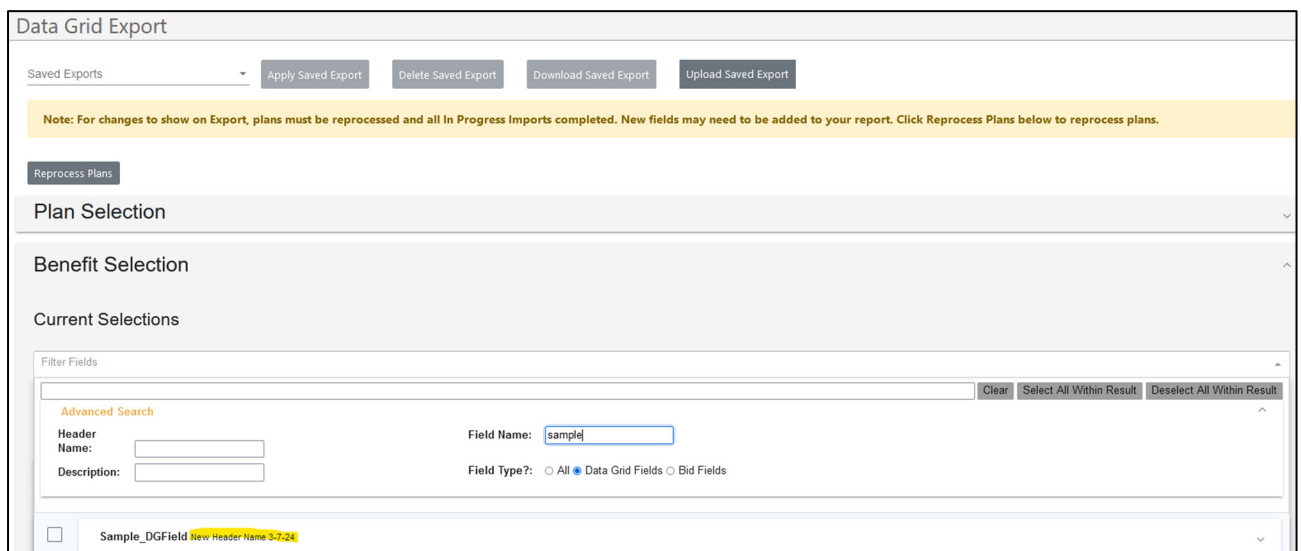

PBP Module:

1. A **Field Header name edit** will now remain associated with the Data Grid Field for the most recent plan year's PBPs.

- a) Enter and save a new Header Name:

- b) Reprocess Contract Year 2024 PBPs and search for the Data Grid field on the Data Grid Export screen or Manage PBPs screen, and the updated header name is shown:

2. **Performance improvements** were made.

- a. Ability to import a zip file of several Json files without timing out.
- b. Faster loading of Plan data on the PBP Import, Data Grid Export, and Manage PBPs screen.

3. Plan Selection of **Latest Versions for TY/NY** will now be retained in a Saved Data Grid Export

The screenshot shows the 'Data Grid Export' interface. At the top, there is a 'Saved Exports' section with a dropdown menu showing 'Sample Saved Export' and four buttons: 'Apply Saved Export', 'Delete Saved Export', 'Download Saved Export', and 'Upload Saved Export'. Below this is a yellow note: 'Note: For changes to show on Export, plans must be reprocessed and all In Progress Imports completed. New fields may need to be added to your report. Click Reprocess Plans below to reprocess plans.' There is a 'Reprocess Plans' button. The main section is titled 'Plan Selection' and contains the question 'Which versions should be included?' with five radio button options: 'Just the Latest Version', 'Also Include Previous Versions (Cannot Publish to CM)', 'Latest Versions for each Year', 'Specific Year', and 'Latest Versions for TY/NY'. The 'Latest Versions for TY/NY' option is selected and highlighted with a yellow background.

4. Code change made to ignore the new “MA&RX” Json header component that Centers for Medicare & Medicaid Services (CMS) added to their 2025 API schema.

a) Example of a current **Bid Field header** in the PBP module:

Rx > Rx VBID > Rx VBID Reduction in Cost

b) Code change prevents the need for all Bid fields to require MA&RX at the start of a header.
