CodySoft May 20th 2019 release notes:

Collateral Management Module:

1. CodySoft Review Space (Annotate) update
   a. A more Adobe-like experience with comments/annotations in the margin both within the review space and the exportable PDF file. All comments/annotations will appear as Adobe comments, as if the review had been performed in Adobe.
   b. An enhanced User Interface that makes better use of the available screen space, making for easier document viewing.
   c. Configurable, color-coded document tagging. Cody can work with clients to configure a unique set of document/review tags that will allow reviewers to quickly identify different types of comments within the documents.
   d. Real-time chat within the review space that allows for direct communication with other reviewers.
   e. Automatic, real-time refresh of comments and chat messages. New comments will automatically appear in the margins of the document as reviewers contribute to the review.
   f. Ability to search and filter on annotations, chats and tags.
   g. Ability to export all comments as an audit log CSV file.
2. Parsing Process Updates
   a. Improved Test-A-Template and Template-to-Version variable parser that eliminates some inefficiencies with blank rows and spaces across tables. This will largely eliminate the need to run any macros after document versioning.
